

Matt Wilson

Full Stack Engineer

wilson.mjaw@gmail.com 07624 337165 Isle of Man [LinkedIn](#) [GitHub](#) [mattwilson.tech](#)

PROFILE

Full stack engineer with 4 years of production experience across banking and wealth management. I take projects from rough requirements to running systems people depend on — most recently delivering a client-facing fintech app almost entirely solo, and rebuilding its authentication in-house to meet EU data compliance. Azure certified, self-taught, and most useful where the requirements are ambiguous and the environment is imperfect.

TECHNICAL SKILLS

Languages · TypeScript (strict), JavaScript, Python, Bicep

Backend & Data · NestJS, Node.js, REST/OpenAPI, GraphQL, Prisma, PostgreSQL, SQL Server, Clean Architecture, DDD

Cloud & DevOps · Azure (App Service, Blob Storage, Key Vault, Container Registry, Entra ID), Azure DevOps CI/CD, Bicep IaC, Docker

Frontend · Next.js 15, React 19, React Native (Expo), TanStack Query, Jotai, Tailwind CSS

Auth & Security · Entra ID, BetterAuth, OAuth2, JWT, MFA/TOTP, biometrics (iOS & Android)

AI & Testing · Claude Code, Model Context Protocol (MCP), agent orchestration · Vitest, Jest, Cypress, Maestro, Supertest

EXPERIENCE

Full Stack Developer · Stonehage Fleming (SF Digital)

Jan 2024 – Mar 2026

Remote / Isle of Man

Next.js 15 · React Native · NestJS · TypeScript · PostgreSQL · SQL Server · Prisma · Azure DevOps · BetterAuth · Docker · Cypress · Maestro

- Absorbed technical decision-making and work allocation across both projects when the team lead resigned mid-programme — the investment platform was in late-stage UAT and the mobile app had just begun. Routed platform feedback to a colleague and took the mobile build myself: the platform shipped to production four months later, and the app reached production-ready by year end.
- Ended two years of recurring CI failures in a single conversation: our container registry pipeline broke every few months on manually rotated credentials. Rather than escalate as others had, I approached the Swiss cloud team directly and proposed Workload Identity Federation as a mutual win — implemented in forty minutes, and the failure never recurred.

Global Best Ideas — investment management platform · *sole frontend engineer*

- Replaced the manual Excel-and-email process used to track clients, transactions and valuations across a fund holding roughly \$4B in assets under management — cutting valuation production from over thirty minutes to about one minute, removing hours of daily data entry and measurably improving record accuracy.
- Designed the Next.js project structure and delivered full management capability across five pages — infinite-scroll lists, optimised forms, CRUD-consistent architecture — with Entra ID SSO for single-click access inside the firm's existing environment.
- Worked contract-first rather than waiting on endpoints: agreed the data contract with the backend engineer up front, built against a mock API, then enforced the generated OpenAPI types against my implementation. The first integration against the real API produced zero errors, and both halves shipped the same day.
- Wrote the team's first Azure Pipelines — App Service deployment, UAT, and PR gates enforcing build and test checks before merge — and led the component library's migration to compound components (15 components solo in a week, 90% coverage), cutting the styling regressions reaching production.

SF Mobile — client wealth management app (iOS & Android) · *owned end to end, ~95% solo*

- Delivered the app from inception to production-ready in six months, giving wealth management clients real-time access to portfolios, documents and transactions.
- Identified that our authentication provider hosted data in the US and could not satisfy EU compliance for our client base. Proposed and built a self-hosted replacement on BetterAuth, delivered in under a sprint by swapping the provider behind an existing repository contract rather than rewriting every consumer.
- Owned the full security surface — MFA (email and phone OTP, TOTP), Face ID / Touch ID biometrics, device recognition and JWT session management — finding and closing real biometric vulnerabilities on physical devices before release.

- Kept the sprint on schedule against a blocked infrastructure backlog by emulating Azure Blob Storage locally with Azurite in Docker Compose, building the document workflow against the real SDK so it moved onto provisioned resources with no code change.
- Built 45+ REST endpoints on Clean Architecture with Zod validation and OpenAPI documentation, a four-language internationalised experience, and the delivery infrastructure behind it: Azure DevOps CI/CD across dev, UAT and production with 245+ test files and Maestro E2E on both platforms.

Junior → Intermediate Software Developer · AAO Holdings

Jun 2022 – Sep 2023

Douglas, Isle of Man · digital banking

JavaScript · TypeScript · React Native · GraphQL · Apollo · Redux · Node.js · Vitest

- Implemented a four-part customer onboarding journey alongside a senior engineer, handling complex conditional state across regulated banking KYC steps, and owned internationalisation configuration across the application.
- Helped design and build a cross-departmental ticket system on a state machine pattern, modelling distinct workflow stages, escalation paths and assignment rules for each department.
- Moved myself across the stack rather than waiting on others: identified that depending on senior engineers for GraphQL integration was slowing my delivery, asked to be taught it directly, and within a week was integrating endpoints independently and unblocking teammates. Went on to build backend endpoints and unit tests alongside frontend work.

PERSONAL PROJECTS

Ralph · Autonomous AI Development Agent

2026

TypeScript · Node.js · Claude Code · multi-agent orchestration

- Zero-config autonomous sprint runner: detects a project's stack and structure, breaks a spec into shippable increments, builds against existing patterns, then verifies against the project's own build, typecheck, test and lint gates before opening a pull request.
- Published openly and receiving unsolicited inbound interest and collaboration requests from other engineers.

Imperium · AI Knowledge Management Platform

2025 – 2026

Python · Flask · Docker · n8n · Anthropic API · Hetzner · Caddy

- Multi-service platform deployed and operated on a Hetzner VPS behind Caddy — Docker Compose orchestration, multi-environment config, a cost-tiered Haiku → Sonnet → Opus routing pipeline, and governance-schema validation on every write. 600+ tests at 93% coverage.

CERTIFICATIONS

Microsoft Certified: Azure Administrator Associate	EXAM BOOKED	23 Oct 2026
Microsoft Certified: Azure AI Apps and Agents Developer Associate	EXAM BOOKED	7 Sep 2026
Microsoft Certified: Azure Developer Associate		Issued Mar 2025
Microsoft Certified: Azure Fundamentals		Issued Sep 2024

EDUCATION

A-Level Psychology, Business Studies, Media Studies · King's Interhigh Online School	2019 – 2021
